

The National Agency for Infrastructure (ANI) is part of the Ministry of Transport in Bogota, Colombia. The agency is in charge of the design, construction, maintenance, and operation of transport infrastructure in Colombia. Its goal is to integrate all roads, railways, ports, and airports by 2035 to connect the 32 departments of the country.

"With Microsoft Project Online, we can better prepare project schedules, see the progress of projects, anticipate and resolve problems, and facilitate communication among the teams. This tool is, without a doubt, an important factor for improving project and portfolio management."

Luis Fernando Andrade,
President, ANI

Agencia Nacional de
Infraestructura

SITUATION

With large government projects underway and more funding for roadwork, ANI was managing more than 75 highway and infrastructure projects simultaneously. The agency deployed Microsoft Project Online to improve its project and portfolio management abilities and collaboration.

BENEFITS

- Improved collaboration and engagement among agency employees, builders, and auditors
- Increased process transparency, data reliability, and speed of decision-making
- Minimized risks and optimized public resource use

Project
