

Introduction to Copilot Agents

Quick Reference Guide

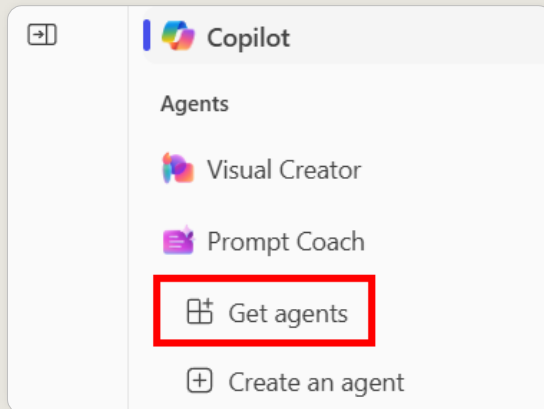

What are Copilot Agents

An agent is a customisable tool that draws on the power of Generative AI (GenAI).

An agent can be as simple as a Gen AI tool with a focused data set or more complex such as managing an entire workflow, integrating with multiple systems to automate end-to-end processes.

Add an agent from the App Gallery

- In Copilot from the panel under **Agents** select **Get agents**
- Find your required agent in the App Gallery
- Click **Add**

How do these agents relate to Microsoft Copilot?

Microsoft Copilot is an AI-powered assistant on its own but it also acts as the interface through which you interact with various agents.

Copilot Agents are the specialised tools that perform specific tasks.

You could think of it as Copilot being your mobile phone and agents being the apps on your phone.
